U.S. National Stage of I. A. No. PCT/GB 2005/000141 I. A. Filing Date: 19 January 2005

Attorney Docket No. 125795.00101

IN THE CLAIMS:

Please make the following amendments to the claims as noted.

1. (original) A seal having at least one aperture through which lubricant can pass

and at least one track detachably secured to, and extending along, at least part of the length of

at least one surface of the seal.

2. (original) A seal according to claim 1, wherein the seal takes the form of at

least one hollow annular ring.

3. (currently amended) A seal according to claim 1-or claim 2, wherein the seal

is made from an elastomeric material.

4. (original) A seal according to claim 3, wherein the seal is made from a

formulated elastomeric compound having resilience such as rubber-like.

5. (currently amended) A seal according to claim 3-or claim-4, wherein the seal

is formed as an elongated elastomeric extrusion.

6. (currently amended) A seal according to any one of claims 1 to 5 claim 1,

wherein the track or each is interchangeable with a further track of the same design.

U.S. National Stage of I. A. No. PCT/GB 2005/000141 I. A. Filing Date: 19 January 2005

Attorney Docket No. 125795.00101

7. (currently amended) A seal according to any one of claims 1 to 6 claim 1,

wherein the or each track has a material strip attached thereto.

8. (original) A seal according to claim 7, wherein the material strip is formed

from fibrous material.

9. (original) A seal according to claim 8, wherein the material strip is porous.

10. (currently amended) A seal according to any preceding claim 1, wherein the

seal has at least one aperture enabling the lubricant to flow to the track surface.

11.. (original) A seal according to claim 10, wherein the track has at least one

aperture enabling the lubricant to flow to and into the material strip.

12. (currently amended) A seal according to claim 10 or claim 11, wherein the

seal has a further aperture allowing lubricant to pass to neighbouring seals via a connection

means.

13. (original) A seal according to claim 12, wherein the connection means takes

the form of a hollow tube.

- 3 -

14. (original) A seal comprising a chamber for containing lubricant, the chamber having a path to allow flow of lubricant to an outer surface of the seal so to cool that surface,

and the seal having at least one track detachably secured to, and extending along, the length

of at least one surface the seal.

15. (original) A seal according to claim 14, wherein the chamber comprises at

least one longitudinal groove formed in the outer surface of the seal.

16. (original) A seal adapted to contain a lubricant whose external surface is in

part defined by a lengthwise extending track releasably secured to the remaining part or parts

of the seal external surface.

17. (original) A method of producing a seal adapted to contain a lubricant, the

method comprising the steps of:

extruding a strip having a lubricant containing channel bordered on all but one

surface by a cover formed integrally with the strip,

extruding an elongate track dimensioned to fit said one surface, and

detachably securing the track to the strip.

18. (original) A seal substantially as hereinbefore described as referred to in the

accompanying drawings.
